

Bosch's Laser Pen Level

Monday, 24 March 2008

Last Updated Thursday, 22 May 2008

This is a nifty little tool to have in your workshop.

The PLL 5 Laser pen for perfect levelling up to five metres in length.

• Projects five metres in length - horizontal, vertical or inclined laser lines on walls or ceilings.

• Wall holder for fixing to virtually all surfaces, allows for the fine adjustment of the laser beam's position.

Whether you are hanging pictures, fitting curtain rails or laying tiles: the Laser Pen PLL 5 projects accurate horizontal or vertical laser lines up to five metres long onto the wall. These lines can then be used to mark drill holes or tile edges precisely level " without the awkward handling normally experienced with a conventional spirit level. And this leveling tool is small and handy: a pocket-sized five meter spirit level.

The tool comes complete with a wall holder that is especially practical. It is easy to fit the holder to any wall using nails, pins, screws or adhesive tape. The PLL 5 is held magnetically on the holder, enabling you to easily set the laser to the exact position. Thanks to the smooth contact surface, this tool can also perform the function of a conventional spirit level with its vials. This is practical when aligning furniture or when installing a washing machine.

The Laser Pen PLL 5 works with a 635 nanometer laser. This means that the laser line is clearly visible for a range of up to five metres. The laser line has a maximum deviation of one millimeter per metre which ensures that the tool, which resembles a large fountain pen, also meets the high requirements of DIY enthusiasts.
